

UNCC 2026 Final Proposal

(5th September 2025)

Contents

Summary of Amendments (following Request for Feedback)	2
Summary of UNCC Changes	3
1. Streamline Audience Name Values	4
2. Simplification of Audience Party Values	6
3. Removal of Audience Type dimension	8
4. Removal of Campaign Type dimension	10
5. Replace UNCC Dimensions with Ad Platform Reporting	12
6. Remove Duplicate Dimensions	14
7. CN Code string position / structure	16
8. Remove Trusted Publisher dimension	17
Appendix	18

Summary of Amendments

(since Request for Feedback issued August 18th)

On August 18th, the “UNCC Change Request 2026” document was issued to various stakeholders across the Unilever business (including media functions, GDT and agencies), for request for feedback. All feedback was considered and appropriate amendments have been incorporated into this final UNCC 2026 Proposal. Key amendments in this “UNCC 2026 Final Proposal” vs the original “UNCC Change Request 2026 (Aug 18)” are:

- **Campaign-Name-Campaign-CN-Code** string position / structure - see page 16
- **Audience Party** dimension mapping table added (2025 values → 2026 values) - see page 6
- Added final list of UNCC Dimensions to be replaced by API Dimensions - see page 12
- Removal of duplicate dimensions within Criteo ‘Account’ field and Citrus Ad ‘Team’ field (these fields are controlled by retailers, not by Unilever or Agencies) - see page 14
- Reverse the proposal for a new **TikTok Shop** Dimension – this will NOT be added for 2026 based on majority feedback from agency activation teams
- Remove **Trusted Publisher** dimension - see page 17

An aggregated view of all feedback and decisioning is documented in the appendix.

Summary of UNCC Changes (2025 → 2026)

This document outlines the UNCC changes proposed for digital platform naming convention strings that would be implemented for campaigns starting 1st January 2026.

1. **Audience Name** fixed "Super Segment" values removed – free-text only
2. Simplification of **Audience Party** values
3. Removal of **Audience Type** dimension
4. Removal of **Campaign Type** dimension
5. Replace UNCC Dimensions with Ad Platform Reporting
6. Removal of duplicate dimensions from specific platform fields
7. Amendment of string position and structure for **Campaign-Name-Campaign-CN-Code** dimension
8. Remove **Trusted Publisher** dimension

1. Streamline Audience Name Values

Change Request

In 2025 UNCC, the **Audience Name** dimension currently includes an optional set of fixed values (x76 Super Segment names), in addition to optional free-text.

Requestor

Various

Reasoning

With the decommissioning of Unilever's global DMP, the Super Segment audience definitions are deprioritised.

Further, current global reporting evidences that most historical input is free-text, and not one of the x76 super segment values. Therefore, any ambition to aggregate global reporting of audience names is not viable under 2025 UNCC setup.

Therefore, the proposal is to simplify the input and ensure all inputs are free-text only. Guidance will be to name audiences according to local reporting requirements. This will help simplify input requirements and improve workload required for string generation.

The **Audience Name** dimension will not be removed entirely from UNCC, but will remain with free-text only input, because this dimension is still critical for many local reporting needs. If local reporting is not required, free-text input can be submitted as blank.

Example

Meta Ad Set: Audience-Party_**Audience-Name-Free-Text**_Gender_Age-(lower-upper)_Free text

Impacted Platforms

Amazon DSP

DV360 Programmatic

DV360 TrueView

DV360 TrueView (AAR)

Meta

Pinterest

Snapchat

TikTok

TradeDesk

X (Twitter)

2. Simplification of Audience Party Values

Change Request

In 2025 UNCC, the **Audience Party** dimension currently includes an large set of x14 values. 2026 UNCC will be streamlined to only include x4 values:

- Includes 1PD-DAD
- Includes 1PD-DID
- Includes 1PD-DID+DAD
- No 1PD

Mapping Table of Values – 2025 → 2026:

2025 Values	2026 Values
1pd (DAD)	Includes 1PD-DAD
1pd (DAD) + 2pd	
1pd (DAD) + 3pd	
1pd (DAD) + 2pd + 3pd	
1pd (DID)	Includes 1PD-DID
1pd (DID) + 2pd	
1pd (DID) + 3pd	
1pd (DID+DAD)	
1pd (DID+DAD) + 2pd	Includes 1PD-DID+DAD
1pd (DID+DAD) + 3pd	
1pd (DID+DAD) + 2pd + 3pd	
2pd	
3pd	No 1PD
2pd + 3pd	

Requestor

Various

Reasoning

The over-complexity of values has led to input errors and unreliable aggregated reporting. Simplifying values should lead to more accurate string input and therefore more reliable reporting.

There is no requirement to report globally on aggregated 2PD or 3PD spend.

Example

Meta Ad Set: 1PD-DID+DAD _Audience-Name_Gender_Age-(lower-upper)_Free text

Impacted Platforms

Amazon DSP

Criteo (Display On/Off Retail)

DV360 Programmatic

DV360 TrueView

Google Ads Video & Other

Meta

Pinterest

Snapchat

TikTok

TradeDesk

X (Twitter)

3. Removal of Audience Type dimension

Change Request

Remove the **Audience Type** dimension entirely from all platform field strings. For reference, the values within this dimension are:

- Behavioural
- Collected in-platform
- CombinedAudiences
- CRM
- Custom
- Demographic
- In-Market
- Interest/Affinity
- Lifestyle/Life Events
- Lookalike
- In-Market & Lifestyle
- None

Requestor

Various

Reasoning

The values do not align to many ways that audiences are activated in ad platforms, leading to inaccurate and inconsistent input of values.

There are also many instances of duplication, where more than one value could be interpreted as correct (eg. 'Collected in-platform' and 'In-Market').

Further, there is no global requirement to report on these values at an aggregated level.

Example

2025 Meta Ad Set: Audience-Party_**Audience-Type**_Audience-Name_Gender_Age-(lower-upper)_Placement-Type_Device-Type_**Free text**

2026 Meta Ad Set: Audience-Party_**Audience-Name**_Gender_Age-(lower-upper)_**Free text**

Impacted Platforms

Google Ads Video & Other

Lazada (Sponsored Discovery/NPL)

Lazada (Sponsored Display (CPM Bidding)

Meta

Pinterest

Snapchat

TikTok

TradeDesk

X (Twitter)

4. Removal of Campaign Type dimension

Change Request

Remove **Campaign Type** dimension from all platforms and field strings in UNCC.

Requestor

Various

Reasoning

Campaign Type dimension consists of the following values:

- Broad + Performance
- Broad + Precision + Performance
- Broad Audience
- Performance
- Precision
- Precision + Performance

These values are outdated with Unilever marketing practices. There is also duplication with **Objective** dimension which consists of similar values and will remain for 2026:

- Awareness
- Awareness/Consideration
- Consideration
- Conversion

Removing **Campaign Type** dimension will improve flexibility / streamline setup for activation and improve workload required for string generation, whilst ensuring global reporting requirements remain via the **Objective** dimension.

Example

2025 Meta Campaign: Market-Short-Name-(PCat)_Brand-Name_Campaign-Name-Campaign-CN-Code_**Campaign-Type**_Buy-Model_Collaborative-Ad_Objective_**Free text**

2026 Meta Campaign: CN-Code-Campaign-Name_Market-Short-Name-(PCat)_Brand-Name_Buy-Model_Collaborative-Ad_Objective_**Free text**

5. Replace UNCC Dimensions with Ad Platform Reporting

Change Request

The below table summarizes all of the UNCC Dimensions that will be replaced by Ad Platform reporting. *Please see appendix for all dimensions that were investigated.*

Ad Platform	UNCC Dimension to be removed	Platform Field String affected	Ad Platform API Name	Decision	Considerations / Justification
DV360 Programmatic	Format-Type	Creative/Ad	Ad type	Replace with Platform API	Unable to report on native vs non-native going forwards, but all other existing values are available.
	Format-Size	Creative	Creative Size AND Video Content Duration Bucket	Replace with Platform API	Cannot report on specific video durations (eg 30s), but can report on buckets instead (eg 0 to 1 minutes).
DV360 TrueView (IR)	Device-Type	Ad Group	Device Type (Ad Group)	Replace with Platform API	Unable to differentiate "CTV" from "Gaming Device/Console"
DV360 TrueView (AAR)	Audience-Type	Ad Group	Audience segment type	Replace with Platform API	Some existing values are not available, but UNCC dimension is being removed entirely anyway due to inaccuracies and inconsistencies. Utilize this API dimension as optional for a view of Audience Types on DV360 Trueview from 2026.
	Device-Type	Line Item	Device Type (Ad Group)	Replace with Platform API	Unable to differentiate "CTV" from "Gaming Device/Console"
Meta	Placement-Type	Ad Set	platform_position	Replace with Platform API	All required UNCC values are available, plus some new values
	Device-Type	Ad Set	device_platform	Replace with Platform API	Unable to report on "Tablet" going forward
Snapchat	Device-Type	Ad Group	NA	Remove from UNCC - Not relevant for reporting	Mobile-only platform
Trade Desk	Format-Type	Campaign	Media Type	Replace with Platform API	Unable to report on native vs non-native going forwards, but all other existing values are available.

Requestor

Various

Reasoning

The values from these UNCC Dimensions can instead be reported via the ad platform, removing human error / improving accuracy, keeping up to date with latest platform values, and improves workload required for string generation.

Example

See Appendix for all 2026 Platform Field Strings

Impacted Platforms

DV360 Programmatic

DV360 TrueView (IR)

DV360 TrueView (AAR)

Meta

Snapchat

Trade Desk

6. Remove Duplicate Dimensions

Change Request

The below table summarizes which platform field string will have the duplicate UNCC Dimension removed, and where the other duplicate will remain.

Ad Platform	Dimension	Platform Field String - Removal	Platform Field String - Remain
Amazon DSP	Placement-Type	Line Item	Creative
Amazon DSP	Campaign-Name-Campaign-CN-Code	Creative	Order
TikTok	Buy-Model	Account	Campaign
CM360	Campaign-Name-Campaign-CN-Code	Placement Name	Campaign Name
FlashTalking	Campaign-Name-Campaign-CN-Code	Placement	Campaign
TradeDesk	Campaign-Name-Campaign-CN-Code	Creative	Campaign
DV360 Programmatic	Campaign-Name-Campaign-CN-Code	Creative/Ad	Campaign
DV360 Programmatic	Placement-Type	Line Item	Creative
DV360 TrueView (IR)	Campaign-Name-Campaign-CN-Code	Placement	Insertion Order
DV360 TrueView (AAR)	Age (lower-upper)	Line Item	Ad Group
DV360 TrueView (AAR)	Gender	Line Item	Ad Group
DV360 TrueView (AAR)	Audience-Name	Line Item	Ad Group
TradeDesk	Placement-Type	Ad Group	Creative
Criteo	Country-Code	Account	Campaign
Citrus Ad	Country Code	Team	Campaign
	Retailer	Team	Campaign

Requestor

Various

Reasoning

Removing duplicates improves flexibility / streamlines setup for activation, improves workload required for string generation, whilst ensuring the dimensions can still be reported via the remaining Platform Field String.

Example

See Appendix for all 2026 Platform Field Strings

Impacted Platforms

Amazon DSP

TikTok

CM360

FlashTalking

TradeDesk

DV360 Programmatic

DV360 TrueView (IR)

DV360 TrueView (AAR)

7. Campaign-Name-Campaign-CN-Code – string structure / position

Change Request

Amend the structure of the dimension so that CN code is at the beginning: CN-Code-Campaign-Name.

Move this dimension to the beginning of all relevant platform field strings.

Requestor

Unilever Global Media, GDT and WPP UNITE (Global).

Reasoning

CN code is more important than ever. It is the critical identifier of campaigns across various systems, including planning tools; finance reporting solutions; media activation platforms; media reporting suites.

Moving CN code to the beginning of each relevant platform string will ensure that it is readily identified and measurable by media reporting solutions.

Example

2025 Meta Campaign: Market-Short-Name-(PCat)_Brand-Name_**Campaign-Name-Campaign-CN-Code**_Campaign-Type_Buy-Model_Collaborative-Ad_Objective_**Free text**

2026 Meta Campaign: **CN-Code-Campaign-Name**_Market-Short-Name-(PCat)_Brand-Name_Buy-Model_Collaborative-Ad_Objective_**Free text**

Impacted Platforms

All

8. Remove Trusted Publisher Dimension

Change Request

Remove **Trusted Publisher** dimension entirely from all strings.

Requestor

Unilever Global Media and WPP UNITE (Global).

Reasoning

Unilever's Trusted Publisher network will be decommissioned, in favour of a more robust program directly via the DSPs. Reporting at publisher-level is available directly via the DSPs own platform reporting.

Example

2025 Trade Desk Ad Group: Buy-Model_Targeting-Strategy_Audience-Party_Audience-Name_Gender_Age-(lower-upper)_Device-Type_**Trusted-Publisher** **Free text**

2026 Trade Desk Ad Group: Buy-Model_Targeting-Strategy_Audience-Party_Audience-Name_Gender_Age-(lower-upper)_Device-Type_ **Free text**

	Audience-Type	Ad Group	Audience segment type	Replace with Platform API	Some existing values are not available, but UNCC dimension is being removed entirely anyway due to inaccuracies and inconsistencies. Utilize this API dimension as optional for a view of Audience Types on DV360 Trueview from 2026.
	Device-Type	Line Item	Device Type (Ad Group)	Replace with Platform API	Unable to differentiate "CTV" from "Gaming Device/Console"
FlashTalking	Format-Type	Placement	NA	No Change - Continue via UNCC	Unable to investigate at this time
	Format-Size	Placement	NA	No Change - Continue via UNCC	Unable to investigate at this time
Google Ads (Video)	Placement-Type	Campaign	No applicable option	No Change - Continue via UNCC	No Match
Google Ads Search	Keyword-Match	Campaign	Keyword match type	No Change - Continue via UNCC	Cannot differentiate Dynamic Search ads vs non-Dynamic Search Ads via API

Meta	Buy-Model	Campaign	NA	No Change - Continue via UNCC	No Match. Also required by agency activation teams for streamlined operations.
	Placement-Type	Ad Set	platform_position	Replace with Platform API	All required UNCC values are available, plus some new values
	Device-Type	Ad Set	device_platform	Replace with Platform API	Unable to report on "Tablet" going forward
	Format-Size	Ad	No applicable option	No Change - Continue via UNCC	No Match
Pinterest	Placement-Type	Ad Group	Ad group placement	No Change - Continue via UNCC	No Match
	Device-Type	Ad Group	Device	No Change - Continue via UNCC	No Match
	Format-Type	Ad	Ad format	No Change - Continue via UNCC	No Match
	Format-Size	Ad	No applicable option	No Change - Continue via UNCC	No Match
Snapchat	Buy-Model	Campaign	Buy Type	No Change - Continue via UNCC	No Match. Also required by agency activation teams for streamlined operations.
	Device-Type	Ad Group	NA	Remove from UNCC - Not relevant for reporting	Mobile-only platform
	Format-Size	Ad	No applicable option	No Change - Continue via UNCC	No Match
TikTok	Device-Type	Ad Group	NA	No Change - Continue via UNCC	No Match
	Format-Size	Ad	No applicable option	No Change - Continue via UNCC	No Match
TradeDesk	Format-Type	Campaign	Media Type	Replace with Platform API	Unable to report on native vs non-native going forwards, but all other existing values are available.
	Buy-Model	Ad Group	Market Type	No Change - Continue via UNCC	We still need to distinguish between PMP vs Preferred Deal vs Programmatic Guaranteed - which is not possible via platform API.
	Device-Type	Ad Group	Device Type	No Change - Continue via UNCC	Platform API does not include reporting on DOOH, which is an important and significantly used device.
	Format-Size	Creative	No applicable option	No Change - Continue via UNCC	No Match
X (Twitter)	Device-Type	Ad Group	No applicable option	No Change - Continue via UNCC	No Match
	Format-Size	Ad	No applicable option	No Change - Continue via UNCC	No Match

Overview of all aggregated feedback and clarifications - following the Request for Feedback on August 18th 2025:

Feedback from (Team or Workstream)	Dimension	Media Platform	Feedback	POC	Clarifications	Status
CDSP	Audience Name	All	How will replacing the segments that reflect consumer interests help us gain a clearer understanding of Unilever's new concept of communities?	Ceren, Georgiana, Abhi	This proposal does not include a "replacement" for super segments. In an ideal world, there would be a new set of audiences or community names that will be onboarded to UNCC. However, no BG has defined these communities at this time. Future ambition will be to onboard these values as and when they are defined. New values can be added to UNCC throughout the year, and is not dependent on the annual refresh cycle. With these changes, there is alignment that no aggregated reporting will be supported at a global level for "Audience Name" - free-text remains in place to support local reporting requirements only. To be investigated in parallel: Future need to report on CDSP audience names globally (see row below).	Continue with proposed changes. Investigate new values in parallel (not time dependent).
CDSP	Audience Name	All	Will there be any safeguards in place to prevent typos in the Audience Name? We're considering a proposal to send a master list of created audiences for integration via Accutics.	Ceren, Georgiana, Abhi	If there is a new master list of audience names that you'd like to be onboarded, we welcome this and can add them as fixed values. New values can be added to dimensions at any time, and do not depend on an annual UNCC refresh. Next steps is to explore the specific reporting requirement (eg spend against individual DAD/ACT audiences?) and how to solve.	Continue with proposed changes. Investigate new values in parallel (not time dependent).
CDSP	Audience Name	All	Will this dimension be limited by the character limit for Audience Names on certain platforms?	Ceren, Georgiana, Abhi	The majority of strings already contain free-text Audience Names. No character limit is currently set for this dimension. Recommendation is to continue with no immediate character length limitations for Audience Name, whilst also monitoring any non-compliance that may be caused and investigating potential platform-specific character limits in parallel.	UNCC Team to investigate post-refresh.
DDM Report	Objective Short SEARCH	All	Will the Objective Short SEARCH dimension be deprecated as well?	Aharon, Shreyas	No, Objective dimension is not being removed from any platforms.	Continue with proposed changes.
DMPT	All deprecated dimensions	All	Will there be any changes for the historical campaigns created before 2026 (whether still running or stopped)?	Georgiana, Dipesh, Florian	No change is required for any campaigns that launch before Jan 1st 2026, except if campaign end dates run beyond Jan 31st 2026. For those campaigns, it is recommended to create new strings that comply with 2026 UNCC. This will ensure compliance with the Digital Process Audit (DPA). Alternatively, seek exception to the DPA for those affected campaigns.	Clarified
DMPT	Language, Retailer Name, Influencer Post Type	All	Would it be possible to remove NA short name as the abbreviation from Not Available? It is usually confused with either Language, Retailer Name, or Influencer Post Type. Potentially Not Available can be replaced with None	Georgiana, Dipesh, Florian	Recommendation is that this is not changed, to allow for uniform short names across dimensions, ensure no impact to character length limits and no impact to downstream reporting solutions. The dimension should be identified from the position in the string. Also, flagging concern over accuracy of identifying values without any mapping to string position, due to potential interference from any free-text outputs. Consideration: Version history must be maintained to reference any string position changes, which should be minimal.	Continue with proposed changes.
DMPT	All available dimensions	All	There are 3 values which can be matched to both brand and retailer: Plus, Ushop and Via - is it possible to realign these? Proposal for improvement: Br-Plus (brand name) and Rt-Plus (retailer name)	Georgiana, Dipesh, Florian	Recommendation is that this is not changed, to ensure no impact to character length limits and no impact to all downstream reporting solutions. The dimension should be identified from the position in the string. Also, flagging concern over accuracy of identifying values without any mapping to string position, due to potential interference from any free-text outputs. Consideration: Version history must be maintained to reference any string position changes, which should be minimal.	Continue with proposed changes.

DMPT	Brand, Pcat	All	Mayo is both a brand and a pcat, and additionally is used in Free Text as May month for ES campaigns - it is possible to realign this? Proposals for improvement: - remove Mayo brand - add the abbreviation Br-Mayo (brand name) and Pcat-Mayo (product category name)	Georgiana, Dipesh, Florian	Recommendation is that this is not changed, as Unilever master data will be difficult to amend and require multi-stakeholder alignment. It will also ensure no impact to character length limits and no impact to all downstream reporting solutions. Instead, the dimension should be identified from the position in the string. Also, flagging concern over accuracy of identifying values without any mapping to string position, due to potential inference from any free-text outputs. Consideration: Version history must be maintained to reference any string position changes, which should be minimal.	Continue with proposed changes.
DMPT	Landing Page, Retailer	All	There are other 2 duplicated values for LandingPage and Retailer - D2C. Proposals for improvement: - remove from retailer dimension - add the abbreviation R1-D2C (retailer name) and LP-D2C (landing page type)	Georgiana, Dipesh, Florian	Recommendation is that this is not changed, to ensure no impact to character length limits and no impact to all downstream reporting solutions. The dimension should be identified from the position in the string. Also, flagging concern over accuracy of identifying values without any mapping to string position, due to potential inference from any free-text outputs. Consideration: Version history must be maintained to reference any string position changes, which should be minimal.	Continue with proposed changes.
DMPT	Trusted Publisher	Dv360, TTD	For Dv360 Programmatic and TTD media platforms, TrustedPublisher is present in 2 different lineltems - is it possible to remove from one of these?	Georgiana, Dipesh, Florian	New change: Trusted Publisher will now be removed entirely from UNCC	No longer applicable
DMPT	All available dimensions	All	Will the relationship tables be refreshed based on the new UNCC updates?	Georgiana, Dipesh, Florian	Yes, dependency tables and any other mapping tables to be shared.	Resolved
DMPT	Landing Page	TikTok	TikTok Shop campaigns are often flagged with the Free Text value "TTS" - is there any plan to correct the historical campaigns?	Georgiana, Dipesh	No, historical strings will not be changed retrospectively.	Resolved
DMPT, PHD Global	Placement Type, Format Type, Format Size, Buy Model, Device Type, Keyword Type, Targeting Type	All	Context: 'Fields planned for replacement via Ad platform' --> anticipate this is still a global reporting requirement (views will be updated once we are aligned on the platform dimension & data is ingested, this platform dimension is expected to be used for historical reporting of campaigns (rather than the historical string value) Question: Since placements names and formats names are not standardised across the APIs of different media platforms, this change will impact cross-platform reporting and benchmarking - would you have any insights around the global media strategy for this?	Georgiana, Dipesh, Vivien Cheng	The proposal should enable greater accuracy of reporting (eg reporting on exactly the correct format, rather than local teams inferring a format name based on a need to try and aggregate data across platforms). Instead, we suggest that aggregation is still possible, and can take place after the API data pull when the data is organised (transformation and cleansing layer). Matching table to be produced based on output from ad platforms and global reporting requirements.	Continue with proposed changes.
DMPT	N/A	All	Can 'product format' or 'product name' be included in the string / suggested position for free text? (this has been requested by local teams)	Georgiana, Dipesh	No - Product Name or Format does not currently map to a campaign in Unilever master data. The lowest denominator is PCAT. Campaigns often don't even promote a specific product, sometimes a range of products or no products at all (eg just the brand). Free text can of course be used by local teams as required. Future opportunity to explore an asset naming convention if you wanted to understand product format/product name being advertised as this is the level at which this information would best captured.	Continue with proposed changes.
DMPT	All deprecated dimensions	All	Some of the deprecated dimensions will result in impacting DMPT dashboard views and data shared to downstream teams - please confirm if we should decommission these data flows after January 2026 Impact assessed: - BG/Category/Brand/Country Audience Report: Segment Name, Audience Type, Campaign Type - Facebook/Instagram/Twitter/Snapchat/Youtube/Tiktok comparative trends over: Format Type, Placement Type, Device Type, Audience Type - Data shared to other Unilever products: Audience Type, Campaign Type, Format Type, Placement Type, Device Type	Georgiana, Dipesh	Primary dimensions impacted are Audience Type and Audience Name. Any existing reporting via these dimensions are likely to be inaccurate anyway. To be discussed with RROI team (eg service local RROI requirements via local naming requirements, not global). Besides those audience-related dimensions, there should be no other impact on reporting views. Any platform-API dimensions that replace UNCC-dimensions are only being approved if existing reporting requirements are still met. UNCC lookup to master data should provide BG,category and brand data.	Continue with proposed changes. Align with RROI post-refresh on Audience-related dimension changes.

DMPT/RROI	All deprecated dimensions	All	Where there is a simplification of values e.g. Campaign type & objective / Audience party - will we be provided mapping between old to new so we can maintain global reporting accordingly?	Georgiana, Dipesh	Yes, this will be provided for Audience Party, but it is not possible for Campaign Type.	Resolved
DMPT/RROI	All deprecated dimensions	All	There are 17 dimensions which will not be populated anymore after January 2026 based on latest UNCC changes, therefore we need to check the priority with Rapid ROI team, along with the internal API availability: Audience Type Audience Type Short Buy Model Buy Model Short Buy Type Buy Type Short Campaign Type Campaign Type Short Device Type Device Type Short Format Size Format Type Format Type - Short Global Audience (Segment Name) Global Audience Short (Segment Name) Keyword Match Keyword Match Short Keyword Type Keyword Type Short Placement Type Placement Type Short	Georgiana, Dipesh	Agreed, we would like to support this alignment with the RapidROI team. We need to make sure the dimensions being captured align to how teams optimise media and campaigns so that feedback can deliver value from RROI.	Align with RROI post-refresh.
MDS UK, 1UL DDM, PHD	Audience Party	All	2PD and 3PD dimensions are required for the DDM Report. If this report is required on an ongoing basis, we need to keep these values.	Eve Clifton Aharon Pinto , Shreyas Shelke	Confirmation required from 1UL DDM team.	TBC - Pending 1UL DDM
1UL GMO	Targeting-Strategy Audience-Party Audience-Name Gender Age-(lower-upper)	All	Are we confident that there are a) a standard set of options for each and b) that an individual line item would always be targeting a distinct audience? If no to either, why would they be mandated?	Sam Mathie	a) Yes, there are a standard set of values for all, except Audience-Name where we are proposing free-text only for 2026. The reason for keeping Audience-Name as an optional dimension is because we know it is critical for many local teams, so we keep it as optional in UNCC to enable local reporting requirements (not global reporting). No changes to the position of the dimension, so that existing reporting configurations are maintained. That said, the CDSP team may be proposing a new set of mandated values for Audience-Name in the future (see above). b) Yes, we are confident that these dimensions are inserted into the correct platform fields. This is where they've been within UNCC for a number of years, and no markets have flagged that this needs to change (we have already streamlined and moved a few other dimensions for this refresh). With a shift to more audience-agnostic targeting (eg SFDG, brandverse communities, AI optimisation), Audience-Party, Gender and Age all offer broad values to select if needed. Regarding Targeting Strategy, WPP UNITE also recommend continuing with existing values - we see "AI Targeting" as an additional layer of optimisation on top of the existing targeting strategies, not as a new value. AI Targeting will be monitored via bespoke tracking without any requirement from UNCC.	Continue with proposed changes.
1UL GMO	Trusted Publisher	DSPs	I am thinking back to the work Andrea did on Trusted Publishers, which seemed to me like an awful lot of effort (for him and the markets) for little reward. Is that the case and if so, who is responsible for managing the master list of Trusted Publishers? Surely we could pull the publisher name from platform APIs in a different way instead?	Sam Mathie	Aligned with SJ and SM to remove Trusted Publisher dimension from UNCC entirely. This is now a local reporting requirement (not global) and can be serviced via DSP reports instead.	Resolved. New change to be added.
1UL GMO	All	All	To try and be future proof, do we need a 'default' string structure that can be utilised for any platforms that are missing e.g. new platforms or local platforms? I do not see Microsoft on your list for example, plus I am sure there will be lots of retail platforms that grow to prominence in the future.	Sam Mathie	Unfortunately, there are too many nuances with (a) the naming fields that any new platform has available and (b) the dimensions that are applicable. This will need to be scoped on a platform by platform basis.	No change

WPP UNITE USA	All? Campaign Name?	Amazon	128-char limit is causing issues with fitting in both global and local dimensions. Is there any way to shorten global dimensions for AMZ? Eg shorten brand or campaign names?	natalie-kate.bravo@wppunite.com	One possible solution is perhaps removing "Campaign Name" from the global mandated list of dimensions and just mandating the CN code (8 characters)? Perhaps "Brand Name" can also be removed and replaced with just the "Brand Code" (6 characters)? Potentially update US only. Under discussion with UNITE US, Nuno and Prav.	Under investigation. Can be addressed independently of UNCC refresh.
WPP UNITE USA	Audience Party	All	US would like to include US-specific values: 1PD 2PD 3PD 1PD/ 2PD 1PD/ 2PD - LAL 2PDLAL 1PD/3PD - LAL 2PD/3PD N/A	natalie-kate.bravo@wppunite.com	Recommendation to enable these values for US only (via freetext in Accutics). These more granular values can map to global values. Mapping table to be provided.	Resolved No change to the proposal.
MDS UK	Buy Model	Social	Replacing UNCC dimensions with ad platform reporting: I can see here it says about the removal of buy model, but I believe this is an important classification to have as it impacts our reporting. You could have an Awareness buy, but if it is R&F vs Auction, it will have different benchmarks and it is important for the team to be able to see this without having to go fully into the campaign itself.	Eve Clifton	Revert decision and keep Buy Model as a UNCC dimension, do not replace it with platform API reporting.	Resolved No change to the proposal.
GDT - Accutics	New Dimension: Accutics Unique String ID	All	Insert a Unique string ID (generated from Accutics), in order to link reporting outputs to Accutics Strings.	Rishi Talla	Decision to prioritise use of CN code instead of a new Unique String ID. Move CN Code to beginning of all relevant platform strings. Kick off a separate workstream to improve CN Code compliance across agencies.	Resolved. New change to be added.
WPP UNITE Retail Media	Country Code Retailer	Criteo Citrus	Markets have no influence over the naming of Account or Team fields - this is controlled by retailers. Suggest moving the listed fields to Campaign strings?	Yitasta Dubey	Dimensions within Account (Criteo) and Team (Citrus) are already included in other platform fields. We will simply amend Account (Criteo) and Team (Citrus) to free text only.	Resolved. New change to be added.
PHD Global	NA	All	Request new UNCC structure to be released in Accutics in October, to set up January campaigns in time.	vivien.cheng@phdmedia.com	Final Accutics build release will be confirmed after Sept 12, once the UNCC structure is locked in. The team can update Accutics and release in a staggered approach, starting with the most critical ad platforms. Agency teams to share what the most urgent platforms are for 2026 string builds. Unlikely that all platforms will be completed before November 1.	No change
PHD Global	Audience Name and Audience Party	All	Confirmation required on how DDM Report will be impacted going from 2026.	vivien.cheng@phdmedia.com	See row 24 above	TBC
PHD Global	Audience Type	All	Please keep this as a required field as this is required for global reporting streams, unless this has been aligned with the reporting stream owners already. This impacts DDM report, ETB, IC Retail Media reporting streams.	vivien.cheng@phdmedia.com	See row 24 above for DDM Report. IC Retail Media report - IC confirmed that Audience Type field is not required, UNCC 2026 changes will not impact this report. Checking with ETB report owner.	TBC
Various agency activation teams	TikTok Shop	TikTok	All campaigns, or majority of campaigns, do not direct to a TikTok Shop landing page. This new dimension add no incremental value and add burden on activation and BI teams, whilst further restricting character length limits.	Various	Decision NOT to include this new proposed dimension for 2026. The data is already captured in Landing Page Type dimension. Free-Text can be utilised at within the Campaign platform field for those markets that require it.	Resolved. Remove proposed changes.
